

On Wednesday January 24, Roche & ERIBA organize a seminar session entitled **"Roche NGS Sample Prep Solutions: Unlock the Potential of Every Sample"**.

During this seminar, **Maryke Appel** (Senior International Product Manager, Roche Sequencing Solutions) will introduce the Roche NGS Sample Prep portfolio highlighting their complete workflow solutions for NGS Sample Prep for whole-genome, whole exome, Methylation and RNA sequencing.

This session will include two seminars separated by a coffee break:

1. General introduction of Roche KAPA NGS Sample Prep
2. Presentation on the challenges and developments on DNA & RNA Library preparation which includes more technical details and data.

Please find via the other 3 links some additional information about Maryke Appel and an interesting paper from Aigrain et al from the Sanger Institute describing a very neat comparison of 9 commercially available library preparation kits including Roche's KAPA HyperPlus which exhibits a fully efficient adaptor ligation step (!) and less than 10% DNA loss.

I would like to invite you all to attend this Roche NGS seminar session on **Wednesday January 24 at 14:15 - 16:00** in the ERIBA seminar room followed by coffee in the ERIBA pantry.
